information so they can stock these products soon after launch and capitalize on sales. Largest Barrier and the Most Common Way

Pharmacists Hear About New OTC Medications

Based on 244 independent pharmacist responses. Respondents selected all that apply.

Based on 640 independent pharmacist responses. Respondents selected all that apply.

Insights & Actions Pharmacists that listed their largest barrier to stocking new OTC items as being unaware of the new items, selected their patients as how they most often

hear about new items. With the exception of those that chose "other," these pharmacists indicated they hear about new products from manufacturers least often. Manufacturers can easily remedy that with direct outreach to ensure awareness of the latest product launches.
